AgriSalt — Conceptual Wiring Reference

Proposed pin-level wiring only. Verify the exact sensor datasheets before connecting power.

Component	Connection	Note
Moisture sensor analog output	Arduino Nano A0	Check supply voltage and output range.
EC module analog output	Arduino Nano A1	Exact model not selected; verify signal conditioning and ADC voltage limits.
Green LED anode	D3 through 220–330 Ω resistor	LED cathode to GND.
Yellow LED anode	D4 through 220–330 Ω resistor	LED cathode to GND.
Red LED anode	D5 through 220–330 Ω resistor	LED cathode to GND.
Grounds	Common GND where required	Follow each module's documentation.
Power	Regulated compatible USB / supply	Verify every module's allowed supply voltage.

Calibration: Raw ADC values are not EC units. Calibrate with the exact module, probe, measurement method and suitable reference solutions before defining status ranges.

Status: Planning reference only; hardware has not been purchased and actual expenditure is ■0.
